In 1998, Autodesk released the first version of AutoCAD LT, an entry-level version of the software. The new, lower-cost product lacked most of the advanced features of the full-featured AutoCAD (previously AutoCAD Pro), and its high price for the user (compared with other CAD programs) caused AutoCAD to lose market share to low-cost Windows applications such as Microsoft Office. AutoCAD development proceeded in the 2000s, with new features added to AutoCAD LT. AutoCAD LT 2010 is the current version of the software. In 2009, a final release of AutoCAD 2010 was available for many Windows users. However, the new version is available for only the Windows XP, Vista, and Windows 7 operating systems, which were widely used in the 2000s, when AutoCAD LT was released. In 2011, AutoCAD received an update to version 2013. Later, Autodesk announced that 2013 would be the last major release of the software. In 2014, the company started to release version 2014 for free, though it was not as extensive as previous versions. Later, Autodesk released version 2015 (the last major version of AutoCAD) for free. According to Autodesk's website, "2015 is the final version of AutoCAD". Version history 1.1 is the first major update for AutoCAD 2010 (the current version). History AutoCAD was originally a plugin for Microsoft Windows called DGN, which was developed by Martin Poyser in 1987. DGN was freely distributed by Autodesk. The idea behind the program was to provide designers with a Windows-based data management application for their "paper based" work in a similar fashion to VisiOn, like a simplified, easy to use, fast alternative to Microsoft Office. AutoCAD is still available for download for Microsoft Windows and can be used as a stand-alone application. Along with the release of AutoCAD in 1988, Autodesk also released a version of DGN for MS-DOS called DGN 1.1, which was also distributed for free. DGN 1.1 was discontinued in 1999. On February 1, 1990, Autodesk released AutoCAD 1.0, which was also distributed free of charge. Autodesk began charging for the software, with a monthly fee of \$199.99 to become an unlimited user and \$349.99 to become a corporate user. It was the first CAD software to be distributed on a CD-ROM. On July 20, 1991, Autodesk released AutoCAD 1.2 for the Macintosh. Unlike the DOS versions of AutoCAD, the Mac version was not distributed for free. There were no changes to the Windows version between versions 1.2 and 2.0. On December 31, 1994, Autodesk released AutoCAD 2.0 for Windows. The version had a new streamlined interface, as well as a new ribbon interface, better handling of the drawing window, and a new floating window and menu system. AutoCAD also supported many more CAD file formats than in AutoCAD 1.0. AutoCAD 2.0, the first version of AutoCAD to use a full color palette, allowed for the creation of more realistic colors. On May 25, 1995, Autodesk released a1d647c40b

Computer-based essay assessment Computer-based essay assessment is a teaching method for use in schools based on the use of computers to interact with student work, to record and assess their work. Computer-based essay assessment has been described as "one of the most important developments in the field of literacy." Development As early as 1977, the University of Illinois College of Education proposed a system to assess essays with computers. It was not until the 1990s, however, that advances in software technology and computing power made it possible to apply this technology to the writing classroom. Since 2000, the field of computer-based essay assessment has been growing steadily. The first software tools used in essay assessment were developed by researchers at the University of Illinois at Urbana-Champaign in the late 1980s. These tools were capable of capturing the information written in the margins of printed essays. Early essay assessment software tools contained a feature that allowed users to read back selected parts of an essay. For example, when reading student writing, the software would highlight the student's essay in blue and red, which means the writer is reading a sentence that he or she thinks is a good point. The software was designed to be able to recognize and read all the student's writing in one subject. Also, in the early 1990s, software was developed that could grade essays online.
