[Effects of micro-invasive surgery in the treatment of pancreatic neoplasms]. Approximately 2,000 new cases of pancreatic cancer are diagnosed each year. Most of these patients present with inoperable or locally advanced disease. Advancements in radiologic imaging and clinical status have indicated that surgery has a role in the treatment of patients with resectable pancreatic cancer. In fact, recent metaanalyses have indicated improved survival rates following the combined treatment of pancreaticoduodenectomy and hepatic resection with adjuvant gemcitabine chemotherapy. In selected patients with small-duct carcinoma, extirpation of the tumor is the treatment of choice. Attempts to improve the survival of patients with pancreatic cancer include the introduction of new chemotherapy regimens and/or radiologic and surgical techniques. The purpose of this article is to describe the benefits and drawbacks of minimally invasive surgery for patients with pancreatic cancer, and to present new surgical approaches for resectable pancreatic cancer.Q: How do I get a checkbox in a tag to check or uncheck all children inside a tag?
