Free Download Electrical Engineering Fundamentals By Vincent Del Toro Solution.zip. you have a free version available in pdf. Free Download Electrical Engineering Fundamentals By Vincent Del Toro Solution.zip >>> Electrical Engineering.Q: Excel: Use formula to return value of formula I'm sure this is basic Excel behavior but I just can't seem to get this right. I want to calculate the sum of a column with formulas: =SUM(R[-1,4]/C[-3]) Where R has three columns. I want this function to output the sum of column C, but when I run this it outputs #DIV/0! I've tried this in three different ways: =SUM(1/R[-1,4]) Is giving the error "Can't open formula. Error in formula." =SUM(1) Is giving #DIV/0! =SUM(1,R[-1,4]) Is giving the error "This formula would result in an infinite loop." I can understand that the first formula might not work since the first calculation will give values to the second calculation which will eventually become the row sum. The other two work because Excel doesn't require a function to be closed before being called on. I'm trying to find a way to get Excel to tell me that the formula is returning #DIV/0! A: Create a new measure, Formula Result, using the following f30f4ceada
