What's New In?

Create markup assistants: A feature that gives you the ability to add and modify automatically geometry and annotations without the need for any additional steps. These assistants are created using a visual programming approach (via a UI on the Insert tab), which makes the process very intuitive. (video: 2:15 min.) Markup Import and Markup Assist use a new

technology based on on-the-fly execution of automation. Unlike previous versions, these features no longer require you to add commands to create assistants. Instead, you start them in the drawing window. This is called “under the hood” automation. Using the right-click menu, you can start any of these new on-the-fly assistants, and you can even add or delete assistants as needed. There are many more commands available in the right-click menu than in previous versions. On-the-fly execution also extends to the Ribbon. Commands that used to reside in the Ribbon are now available in the Insert tab’s custom menu. And when you right-click to customize the Ribbon, you can add commands to the menu as needed, even if they’re not on the Ribbon. The

Ribbon also has a few new features, which include a Paths and Polylines tab for drawing paths and polylines, and the Schematic tab, which makes it easier to draw schematics with blocky shapes. When your design is done, it's easier to see your layers. The Shapes dialog box now contains a Layer list. (You can change the order of the layers in the list using the Layer dialog box.) You can easily change the order of the layers so that they appear in the correct order. In addition, you can hide or show layers as needed. A new tab in the Drawing Settings dialog box helps you understand what happens when you change your drawing properties. It allows you to see in one screen the effect of each property change, plus the effect of any settings for the entire drawing, so you know what

you're changing and why. You can now use the IPTC (International Press Telecommunications Council) watermark directly from within AutoCAD. The Watermark dialog box makes it easy to set the watermark properties, including the size, orientation, and background color, which is helpful if you're doing a lot of watermarking. The Print dialog box now provides a Table tab. This allows you to select from a list
